

THE TREASURY OF FINANCIAL KNOWLEDGE

Put AI into production in finance — **grounded, auditable, and built on the** industry's own standard.

A large language model is **fluent but not grounded**: it talks about a mortgage or a beneficial owner convincingly, but approximately — and in finance, approximately-right is wrong. Kuber Map gives your agents the **precise, shared, auditable language of the business** — the industry's standard ontology (FIBO), curated and packaged as grounding context every answer can cite.

97%

Auditable answers

cite a real FIBO IRI — up from 0%

0%

Hallucinated citations

down from 55% ungrounded

Measured, not claimed — **263 questions · 5 use cases · 2 models**, scored deterministically (no LLM judge).

WHY IT'S DIFFERENT

Grounding, not a bigger model. The lift is model-robust — a stronger LLM does not close the gap. Every concept carries its **FIBO IRI as a citation**, and provenance (standard vs. curated) is never blurred, so answers are traceable for audit and regulators.

- **Standards-based** — FIBO, the EDM Council's open ontology
- **Audit-ready** — citation + provenance on every claim
- **Open & free** — MIT, runs in the browser, installable

WHAT'S INSIDE

- **5 curated use cases** — loan origination, KYC, securities, regulatory reporting, derivatives
- **Context packs + MCP** — drop-in grounding for RAG or an agent, with citations
- **19 cross-domain bridges** — links FIBO doesn't draw, offered back to the EDM Council
- **Interactive map** — explore the ontology; desktop graph + mobile app
