

THE TREASURY OF FINANCIAL
KNOWLEDGE

Kuber Map

Finance already has a language precise enough to trust. Here's how an AI agent finally learns to speak it. — **an illustrated guide.**

■ Innovate With **Sanjeev**

grounded · auditable · open

“

The limits of my language
mean the limits of **my**
world.

— Ludwig Wittgenstein, Tractatus Logico-Philosophicus

Give an intelligence the right language, and you expand
what it can safely do. Finance already has that language.
It's called **FIBO**.

01

The pattern

Five centuries of finance, and every leap arrived the same way.

Every leap began with a shared language.

1494

Double-entry bookkeeping

Luca Pacioli codifies it in print — a shared grammar for value that still underpins every ledger.

1973

SWIFT

Banks agree on one messaging standard, so money can move between institutions that don't share systems.

2012

The Legal Entity Identifier

After 2008, regulators couldn't reliably say who was who. The LEI (ISO 17442) gives every entity one global name.

2010s

FIBO

The EDM Council models the *concepts* — loans, securities, owners, reports — as one open, machine-readable ontology.

AND NOW, A NEW PARTICIPANT

Finance has a new decision-maker. It doesn't speak **the language yet.**

Every prior leap gave **people and systems** a shared, precise vocabulary. The newest actor on the desk is an **AI agent** — fluent in words, but not grounded in what a mortgage, a beneficial owner, or a regulatory report actually *is*. **The next shared language is for the machines that now reason about money.**

02

The problem

Why the AI pilots dazzle in the demo and die in the audit.

WHERE THIS THOUGHT CAME FROM

I sat in the rooms. The verdict was **unanimous**.

"We tried GenAI. The demo dazzled. Then it couldn't go near a regulated decision."

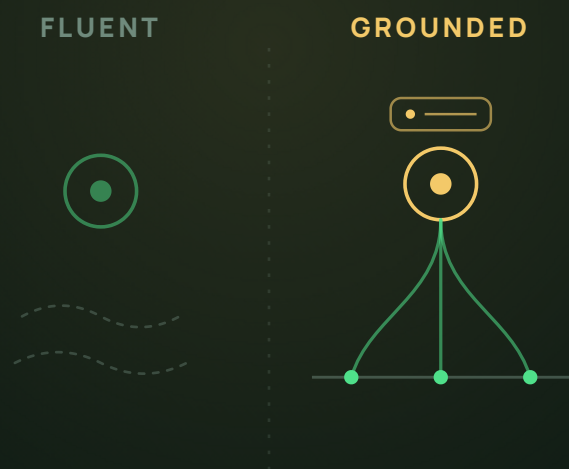

CHIEF RISK OFFICER · RETAIL BANK

"Honestly? I see noise, not ROI. It sounds confident and gets the details wrong."

CFO · LENDING FINTECH

"If it can't show me *why* it answered, I can't put it in front of a regulator."

HEAD OF COMPLIANCE · ASSET MANAGER

THE INSIGHT

Fluent is not grounded.

An LLM talks about a mortgage convincingly — but **approximately**. In finance, approximately-right is the wrong that passes a demo and fails an audit. **The fix isn't a bigger model. It's grounding** — so every answer can cite its source.

One drifts on open water. One is rooted — and carries a citation.

03

The answer

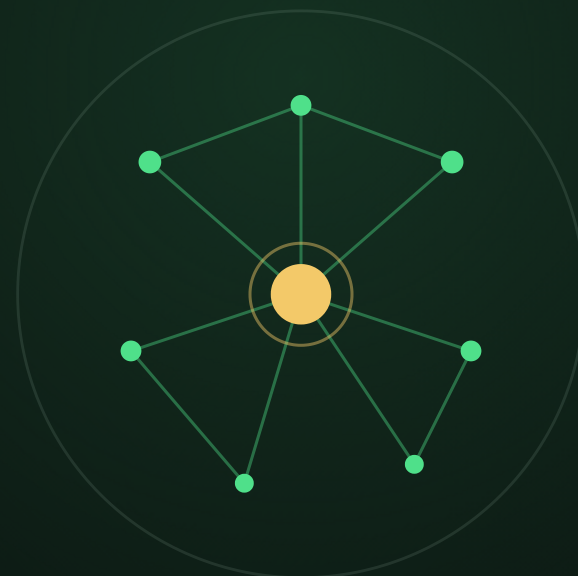

Turn FIBO — the industry’s own standard — into grounding an agent can cite.

WHAT THIS IS

Kuber Map.

FIBO is rigorous but built for modelers. **Kuber Map reshapes it** into a teachable map and portable context packs an agent retrieves and cites — with a FIBO provenance trail for audit.

Named for **Kubera**, keeper of wealth. Its map is forked from **Bodhi Map**, the open knowledge graph of modern AI, and reimagined for finance.

One curated concept at the center; every neighbor a cited FIBO relation.

Three rules we **don't break**.

01 Teach, don't dump

A hand-picked, learner-first "core" — not the whole ontology firehosed at an expert.

02 Never blur provenance

Every fact is labeled **standard** or **curated**. You always know who is talking.

03 Audit over hype

Every concept carries its FIBO citation, so an answer is traceable — for a reviewer or a regulator.

HOW IT WORKS

From open standard to a grounded answer.

EXTRACT

FIBO

10 domains +
Commons — 3,104
concepts,
deterministically.

CURATE

Core view

A learner-first 284
across 5 real use
cases.

PACKAGE

Context pack

RAG + prompt doc +
an MCP endpoint,
with IRIs.

GROUND

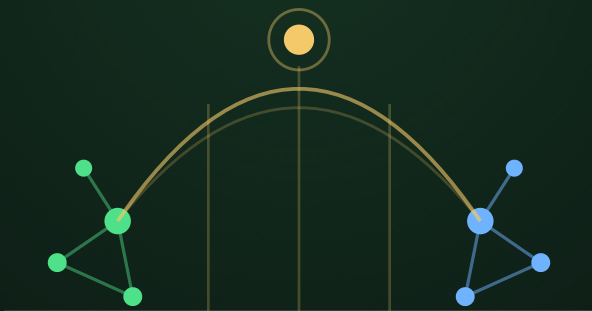

The agent

Answers — and cites
the FIBO concept
behind each one.

One generated data layer drives an interactive map (desktop + mobile) **and** the packs an agent consumes.

THE CONNECTIVE TISSUE

The bridges FIBO leaves unbuilt.

MBS SEC

backed-by →

mortgage LOAN

reporting party FND

identified-by →

LEI BE

CDS DER

references →

bond SEC

19 curated bridges, each grounded + cited, offered back to the EDM Council — the moat that’s hard to copy.

Two domains FIBO governs apart, joined by a curated, cited arch.

In God we trust. **All others
must bring data.**

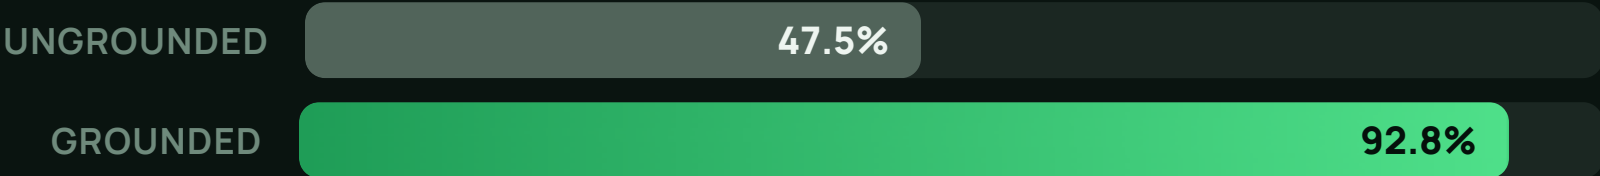

— W. Edwards Deming

So we measured grounding instead of claiming it. **The data
is on the next page.**

THE PROOF — MEASURED, NOT CLAIMED

Same model. Same questions. One of them is grounded.

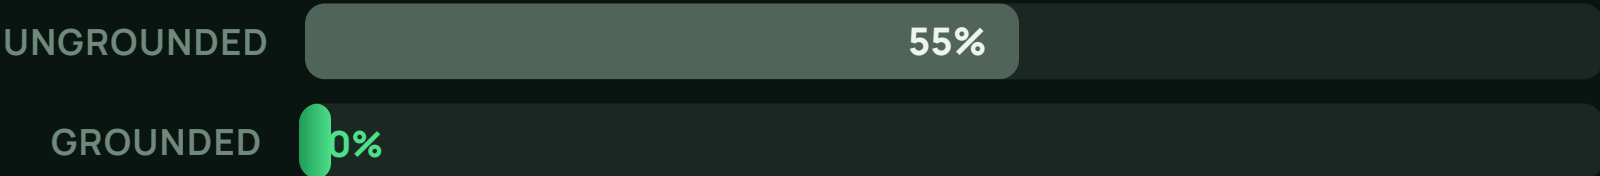

Accuracy +45.3 pt

Answers citing a real FIBO IRI 0% → 97%

Hallucinated citations (lower is better) 55% → 0%

Across **263 questions in five financial domains** on gpt-4o-mini, corroborated on the stronger gpt-4o — where the lift **held**. Scored deterministically; no model grading itself.

The more autonomous the agent, the less room to **be wrong**.

- **Agents chain steps**

It reasons across many hops. One wrong semantic early poisons the whole chain.

- **Cross-domain by nature**

Real tasks span loans, securities, entities, reports. Grounding must connect domains.

- **No human in every loop**

Autonomy removes the reviewer who caught the confident mistake. The citation trail is the control.

- **Trust is the unlock**

Institutions deploy what they can prove. Grounding turns a demo into an audit-ready system.

GROUND, END TO END

Five domains, grounded end to end. **Today.**

- **Loan origination**
underwriting a mortgage

- **KYC & beneficial ownership**
entity resolution

- **Securities**
instruments & issuance

- **Regulatory reporting**
supervisory filings

- **Derivatives**
options, futures, swaps

Adding one is a **spec-driven JSON file**, no code. Payments, insurance, and ESG are next.

KEY TAKEAWAYS

Five things worth remembering.

- 1** The blocker to AI in finance is grounding, not model size.
- 2** FIBO is the industry's shared language — Kuber Map makes it usable and citable.
- 3** Grounding is measured: +45pt accuracy, 97% auditable, 0% hallucinated citations.
- 4** Agentic AI needs it most — chained, cross-domain, autonomous decisions demand a trail.
- 5** It's open, free, and community-built — try it, use it, contribute.

USE IT, BUILD ON IT

Explore, ground, or contribute.

TRY THE LIVE APP — FREE, INSTALLABLE

ai-first-community.github.io/kuber-map

FOR AI TEAMS — USE A CONTEXT PACK

github.com/AI-First-Community/kuber-map

Add a use case

A curated slice for a real task — one JSON file; the tooling verifies every FIBO id.

⇔ Propose a bridge

A cross-domain link FIBO doesn't draw, with a rationale + citation.

Give AI the **language** of finance.

Kuber Map is open, free, and ready. Explore the map, ground an agent, or add the next use case — and help turn "we tried AI" into "we run on it."

Built on **FIBO** (© EDM Council / OMG) · inspired by **Bodhi Map**, the open knowledge graph of modern AI · MIT-licensed & community-built.
